

Dear Colleague,

In September 2011, the [international conference 'Living with a warming ocean'](#) brought to a successful close the European Seventh Framework Programme project [CLAMER](#).

In recent decades, a vast amount of evidence has accumulated to scientifically support the conclusion that climate change is significantly impacting marine ecosystems. CLAMER has summarized the state of the art of these research efforts, focusing on European and EU funded research, and analyzed public knowledge and opinions on climate change issues. In addition, the project tried to reach a wider audience through various communication actions, including a movie and the creation of a coffee table CLAMER booklet.

We are delighted to present you the following CLAMER publications:

- [CLAMER Conference proceedings](#)
- [Science synthesis report of European research on the effects of climate change on marine environments](#)
- [Report card "Sea change: public views on marine climate change impacts in Europe"](#)
- [CLAMER booklet "Climate change and European marine ecosystem research"](#)

These publications, amongst other CLAMER products, are available in the [library](#) of the CLAMER website ([www.clamer.eu](http://www.clamer.eu)). [The CLAMER documentary 'Living with a warming ocean'](#) together with [videos from the presentations](#) and [pictures](#) taken during the conference can also be found in the '[Photo and Video gallery](#)' of the CLAMER website.

We hope that this project has contributed to address and communicate marine climate change issues in a resourceful and collective fashion.

Yours sincerely,

*On behalf of the CLAMER Consortium*

Prof. Dr. Carlo Heip & Dr. Katja Philippart
